- Helps you focus on core competencies

Enterprise Application Services (EAS)

Do you have all the right pieces to support your business strategy?

Today's competitive business environment provides many opportunities for success. Unprecedented access to global markets, stronger relationships with trading partners and improved ability to identify and grow key customer relationships, have all created fresh and potentially lucrative revenue opportunities. Taking advantage of these opportunities has created new and unforeseen challenges.

To take advantage of these expanding market opportunities, organizations must be able to quickly identify and adopt innovative work processes, strengthen relationships with key trading partners and demonstrate clear worth in the value chain.

Solving for Business Value

At Sandiy, we understand that your ERP system can be a powerful tool in your organization achieving these goals for enhanced business advantage, or they can inhibit your organization's agility, competitiveness, and profitability. That is why Sandiy's EAS is an end-to-end solution that supports your evolving business – EAS is a flexible approach to enabling client business value.

We offer a broad suite of services, which include four solutions – Assessment and Planning, Design and Architecture, Implementation, and Managed Application Services – designed to provide clients with a total solution for their SAP, Microsoft, PeopleSoft and JDE ERP Systems.

EAS – Professional Services

Sandiy's Professional Services, which include the solutions of Assessment and Planning, Design and Architecture, and Implementation, addresses your ERP projects from top to bottom. We're a full-service ERP

systems integrator that does much more than just implement ERP applications. Sandiy brings a strategic thought process to ERP Systems Integration – an approach designed to give our clients a competitive advantage through business and/or IT transformation.

Assessment and Planning – We begin by assessing the entire ERP system for the purposes of an upgrade, enhancement or long-term support. The scope of the assessment and resulting plan is jointly defined by the client and Sandiy. The assessment generates a plan based upon the results of the interviews and working sessions with end users, IT applications and infrastructure groups. The plan, recommendations and benefits are presented to the client in order for the client to make a well informed decision on how to proceed with their ERP System.

Enterprise Application Services

Design and Architecture – Provides the client with a detailed application design and architecture plan necessary to implement, upgrade, enhance applications, or develop application interfaces. This service includes both on-site and off-site professional services.

Implementation – This is third step in the solutions lifecycle. Our Implementation services include assisting clients with all their related ERP implementation requirements to assuming full responsibility for the implementation. The final measure of success is the transparency of the implementation and transition to the client's user community, the level of end-user satisfaction, and the responsiveness of the maintenance teams in delivering on-going application maintenance and support. Client's who's goal it is to reduce their overall IT cost while improving the overall effectiveness of the ERP environment on an annual basis often turn to our Managed Application Services Solution.

Managed Application Services

With our Managed Application Services, we help you design, manage, and host reliable, flexible, and secure infrastructures for both enterprise applications and Web sites.

As the premiere provider of IT outsourcing, Sandiy offers you a unique balance of leverage through flexibility and scalability; capabilities for managing all major mainframe and midrange hardware, operating systems, and applications; and reliable data center services, including security and disaster recovery.

You benefit from advanced hosting architectures built for security and performance; expert management, monitoring, and support services, 24x7; high-quality, secure, and redundant environments for continuous operations; and up-to-date management information on both the business and technical status of your environment.

Why Choose Sandiy?

IT strategies are no longer about one-time cost savings — they are about broad-based transformational value.

Built on the experience of more than 10 years of outsourcing expertise, multinational, multi-site implementation experience, Sandiy offers both context application outsourcing and core business consulting in one integrated service offering.

So deep is our network of professionals and partners that we know where to find the right experts for just about any project. We will help you move from planning to deployment with a set of best practices, repeatable processes and resources that go beyond the expected. We provide a view into possible pitfalls and opportunities, and combine extensive product knowledge with deep industry expertise to allow your internal teams to focus on their own areas of responsibility.

With Sandiy, we offer you continuous cost and process improvements while giving you the freedom to focus on your core business.

About Us

Sandiy is a premier provider of IT and business process outsourcing solutions, with over 10 years of experience managing mission-critical operations. For IT-driven companies who lack the resources to cost-effectively maintain all of their tactical IT operations, Sandiy's Outsourcing is an objective-driven method that helps them target and outsource specific, well-defined IT functions while keeping other business-critical operations under internal control. Unlike limited "boutique" services or "all-or-nothing" outsourcing services, our Outsourcing Solutions empower customers to more precisely align their IT infrastructure with strategic business objectives – to reduce costs and improve competitive flexibility.
