

## Sandiy's ERP and Supply Chain Solutions

### **About Us**

Sandiy is a premier provider of IT and business process outsourcing solutions, with over 10 years of experience managing mission-critical operations. For IT-driven companies who lack the resources to cost-effectively maintain all of their tactical IT operations, Sandiy's Outsourcing is an objective - driven method that helps them target and outsource specific, well-defined IT functions while keeping other business-critical operations under internal control. Unlike limited "boutique" services or "all-or-nothing" outsourcing services, our Outsourcing Solutions empower customers to more precisely align their IT infrastructure with strategic business objectives – to reduce costs and improve competitive flexibility.

## Take Your Operations to a Higher Level of Performance

Increase productivity, boost operational efficiency and connect subsidiaries, customers, and business partners globally with an ERP solution that is adaptable, integrated and cost-effective.

The fast pace and china reach of the manufacturing and distribution industries demands continual innovation, speed, and agility. Mounting demand for new product innovation, pressure to reduce costs, and the need for a more efficient and global supply chain are increasing challenges for today's businesses.

For maximum positive impact, you need proven solutions that provide swift and certain ROI with the assurance that risks are low and time to deployment is rapid.

At Sandiy, we help you put the right solution in place so you can adapt to changing global markets, create competitive advantage, and take your organization to a higher level of performance.

### **Are you agile enough to stay ahead of your competition?**

If you have an antiquated MRP system, disconnected financial system, or even an aging or overly complex ERP system, you're likely experiencing some frustration over its inability to quickly meet changing business requirements. Old technology or a one-size-fits-all approach to ERP doesn't adequately address competitive pressures. A truly flexible and agile application is needed to meet unique requirements today with the scalability and flexibility to support future demands.

### **Is the cost of customizing existing systems preventing you from achieving your operational goals?**

For many, the maintenance of existing ERP applications is a costly commitment that increases year after year. To meet changing requirements with older technology, custom coding that touches multiple systems is often required. These customization efforts can be expensive to deploy and difficult to upgrade and have a significant impact on your total cost of ownership.

### **Is your current system only presenting a fragmented view of the business?**

Without a well integrated ERP system, information is not available when and where needed to support better decision making. You may also be facing difficulty integrating with legacy applications and other enterprise software. This fragmented view of key business issues prevents organizations from forging tighter relationships with their customers and partners.

# Sandiy's ERP and Supply Chain Solutions

## Race to business results!

*Delivering World Class Logistics Performance*

Whether your organization is striving for world-class performance or looking for minor improvements, SANDIY Enterprise Solutions makes it easy for you to drive value from supply chain technologies. Our objective approach to analysis, planning, selection and development, implementation, and integration of supply chain solutions are how we deliver world-class logistics performance for your organization.

## Our credentials include:

- Designed and implemented world class supply chains in several industry verticals
- More than 200 successful supply chain execution and warehouse management projects
- 10 years experience building, integrating and supporting a variety of supply chain solutions
- More than 10 years of IT consulting experience

A world-class supply chain is built by effectively integrating multiple complementary technologies. Our business and technical knowledge allows SANDIY to determine what technologies support each other and create a seamless integration. These skills, along with our partnerships, the talent of our people and extensive experience, can help clients identify, understand and implement appropriate solutions and streamline processes.

## The Sandiy Difference

What sets SANDIY apart is the combination of business and technical experience we bring to each engagement. More than 10 years ago, the company was one of the first firms to design and develop a world-class supply chain solution--one that is still in use by many organizations today.

Sandiy doesn't believe in one-size-fits-all solutions. We believe in giving clients choices: choices that allow us to deliver objective analysis and recommendations, and develop solutions that meet our customers' needs, not those of a particular application or provider. We partner with a variety of software and hardware vendors to provide complete solutions to complex problems and can design a custom-tailored solution that works within a specific environment and meets the unique business drivers of our clients.

## Sandiy's Supply Chain Offerings

SANDIY has developed a complete array of consulting services to help organizations leverage technology to enhance the business value of their supply chain operations:

## Selection Projects and Implementations

SANDIY has implemented thousands of WMS, TMS and ERP solutions for clients in nearly every industry, all over the world. Whether your goal is to define a supply chain strategy to dramatically improve warehouse and logistics operations, select a supply chain management system that is right for your business, or implement a system you have already selected, SANDIY can help.

Ours is a unique combination of technical software knowledge, business functional expertise and project management experience that helps customers reduce decision-making and implementation time, integrate systems more seamlessly and achieve results more quickly.

## Logistics Improvement Analysis

SANDIY experts can help clients understand and make appropriate decisions about how to substantially improve their supply chain operations. We offer benchmarking and a variety of other services that help your organization understand how you compare against competitors and other leading logistics operations, and how to cost-effectively bring your organization's systems and processes to a level that is truly world-class.

## RFID Solutions

Whether your goal is to comply with mandates from major retailers, or leverage RFID to drive additional value and competitive advantage from your supply chain operations, SANDIY can help.

### Sandiy's RFID solutions include:

- **RFID Deployment Analysis:** SANDIY works with your team to assess how RFID can positively impact your supply chain operations, and makes recommendations regarding what technology and applications best meet your unique business, budget and scheduled requirements.
- **EPC Compliance:** Sandiy's RFID compliance solution includes an evaluation of vendors to identify the best software, hardware and services for your environment. The implementation of this solution will help you comply with retailer mandates quickly, cost-effectively and in a way that is most appropriate for your business and environment.
- **Closed Loop Solutions:** SANDIY combines RFID expertise with integration and custom development experience to provide closed loop RFID solutions in a variety of industries and applications.

## Sandiy's Unique Credentials

SANDIY's Supply Chain practice is uniquely qualified to help you get the most from your supply chain. Our credentials include:

- More than 200 successfully completed supply chain execution and warehouse management implementation projects.
- Knowledgeable consultants who average 10 or more years of project and business experience.
- A dedicated supply chain practice since 1989.
- Extensive experience and partnerships with leading supply chain applications, as well as supply chain modules of SAP and Oracle (including PeopleSoft Enterprise™, EnterpriseOne™ and World™).
- In-house technology consulting organization able to assess, design, acquire and implement comprehensive wireless and infrastructure solutions in distribution and manufacturing environments.
- Active membership and involvement in associations that establish industry standards, such as CLM, UCC, WERC, Supply Chain Council and APICS.
- Access to more than 900 IT resources in a wide variety of disciplines for complete project support and china reach.

## Specific Sandiy Services

Directly, or through our strategic partners, we can provide the services and solutions you need to meet your business requirements, including hardware (servers, storage, printers, RFID devices, material handling equipment, etc.), software (supply chain execution, warehouse management and event management/visibility) and consulting services (assessment, selection, implementation, integration and project management).

## SANDIY provides the following services based on your unique SCM requirements:

- Project management and planning.
- Software education and documentation.
- Software selection, configuration, customization, implementation and upgrades.
- Software integration with packaged applications, legacy applications, material handling and RFID equipment.
- Hardware analysis, site survey, selection, procurement, installation, integration, and future planning.
- Business consulting including current state assessment, process reengineering, requirement analysis and solution design.
